EDUCATION

Hong Kong University of Science and Technology, Hong Kong SAR, China *2021 -- now*
P.h.D. in Individual Interdisciplinary Program, major in Applied Mathematics
Advisor: Prof. Zecheng Gan; Co-advisor: Prof. Jin-Guo Liu & Prof. Yang Xiang.

The University of Science and Technology of China, China *2017 -- 2021*
B.S. in Condensed Matter Physics & B.S. in Computer Science

RESEARCH INTERESTS

I am interested in computational mathematics and scientific computing in general, with a particular focus on developing efficient numerical algorithms for modeling and simulating complex systems, emphasizing high-performance implementation. Specifically, I am engaged in research on fast summation algorithms tailored for long-range interactions. I have also concentrated on tensor network-based algorithms for combinatorial optimization problems and their potential applications in simulating quantum many-body systems.

PUBLICATIONS

Peer-reviewed Publications

SOFTWARE PACKAGES

ExTinyMD.jl: A framework for molecular dynamics simulations.

EwaldSummations.jl: A comprehensive implementation of the Ewald summation method for electrostatic interactions in both triply and doubly periodic systems with and without dielectric mismatches.

ChebParticleMesh.jl: A suite of highly efficient tools for the widely used Particle-Mesh methods applicable to systems with arbitrary dimensions and periodicity.

TropicalNumbers.jl: A refined implementation of the tropical semiring.

CuTropicalGEMM.jl: A GPU-accelerated implementation of the tropical matrix multiplication.

TreeWidthSolver.jl: A collection of tools for calculating the exact tree width and tree decomposition of a given graph.

OPEN SOURCE PROJECTS

Google Summer of Code 2024, The Julia Language
Contributed to the project "Tensor network contraction order optimization and visualization" released by the Julia Language community in GSoC 2024.

Open Source Promotion Plan 2023, JuliaCN
Contributed to the project "TropicalGEMM on GPU" released by the JuliaCN community in OSPP 2023.

PRESENTATIONS AND POSTERS

JuliaCN Meetup 2024, Invited Talk *Nov 2-3, 2024*
TreeWidthSolver.jl: From Treewidth to Tensor Network Contraction Order

SciCADE 2024, Contributed Talk *July 15-19, 2024*
Fast Algorithm for Quasi-2D Coulomb Systems

JuliaCN Meetup 2023, Contributed Talk *Dec 9, 2023*
How to Implement Generic Matrix-Mul with Generic Element Types on GPU?

ICIAM 2023, Poster *August 20-25, 2023*
Random Batch Quasi-Ewald Method for the Simulations of Charged Particles under Dielectric Confinement

SKILLS

Programming Languages: Julia (proficient), Python, C/C++, CUDA

Languages: Mandarin Chinese (native), English (proficient)
